## A. Managing Files

### a. Adding Files

You can add TIFF files, you want to convert into image files. There are four ways to add the files in the grid.

#### (i) Drag and Drop Files

You can just drag and drop files and folders into the application and it will search for the supported file types and add into the application.

## (ii) Choose the files you want to add into application

Press  button and choose the files you want to add.

## (iii) Add folder and sub-folder with files into it

Press  button if you want to add all the files in one folder. You can select "Include subfolder", if you have files within sub-folder. If this check box is checked then the application will look for supported file types into sub-folder also.

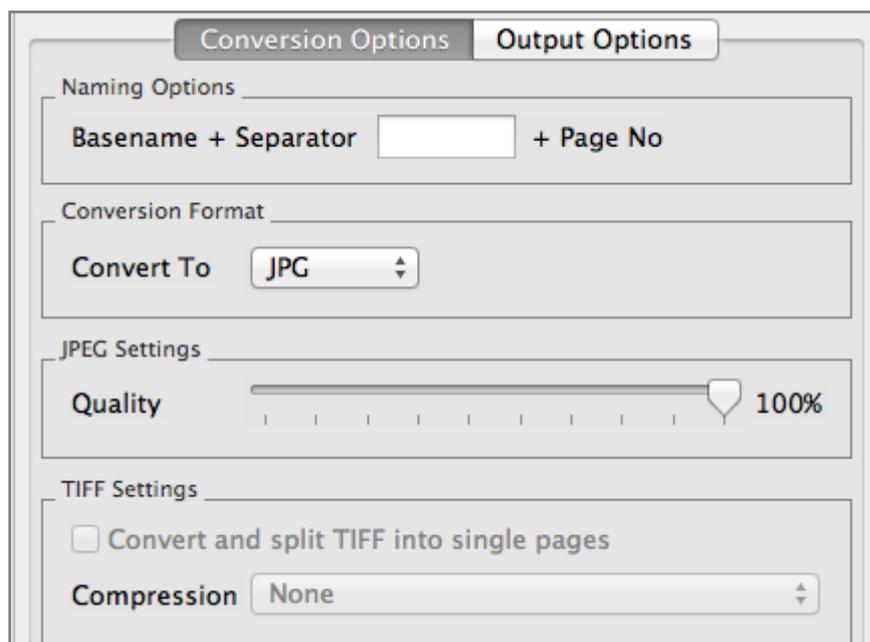

## (iv) Import Files

You can choose this option by clicking at  to add files into application if you have list of files into a text file. You can also copy and paste your list into text box.

## b. Deleting Files

If you want to delete any file in the grid, select the file and right click -> Remove Selection or you can press Delete button on your keyboard as well or click at . If you want to delete all the files in the grid, either right click on any file -> Remove All or click at .

## B. Conversion Options

### a. Naming Options

If you have selected TIFF as output type, file name will remain same as the base file. For all other formats and when you are splitting the TIFF file into single pages by checking at "Convert and split TIFF into single pages", you can choose the Separator between the Base File name and Page Number. It creates the pattern based on your inputs and name the newly created split files.

For example, when you convert one 12 page TIFF Document into JPEG files then the application will create 12 JPEG files and it will be named as Base Name + Separator (Which you can choose) + Page Number. Therefore, if your TIFF Document is Office.TIFF and separator is - then it creates 12 files as Office-01, Office-02.....Office-12.

### b. Conversion Format

You can choose the Image format in which you want to convert the TIFF file.

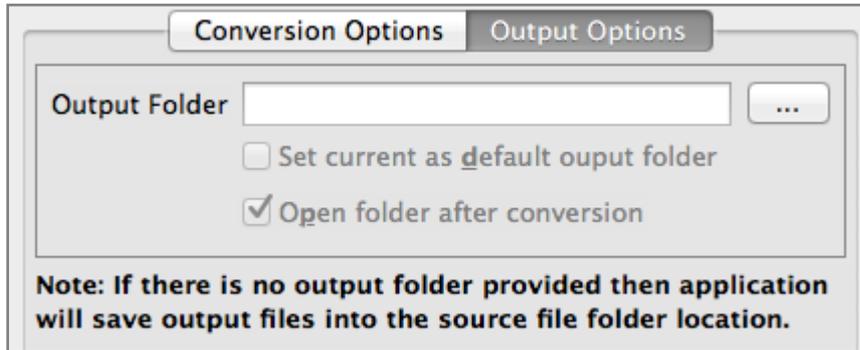

### c. JPEG Settings

You can set the quality of the JPEG image.

### d. TIFF Setting

You can change the compression here and if you wish to split the TIFF file into single pages also, click at "Convert and Split TIFF into single pages".

## C. Output Options

You can choose output folder, where you want to save the file. You can also set the default Output folder for all the conversions.

If you wish to open the folder immediately after the conversion is over, you can select the option "Open folder after Conversion".

## D. Export Export

You can export list of files you can see in file grid into text delimited text file. All the columns you can see will be in exported text files separated by a tab.
